

## Contents

<b>I Lecture 1</b>	<b>0</b>	
<b>1 Crystal Structures</b>	<b>1</b>	
1.1 What is special about crystals?	2	
1.2 What does this suggest about their structure?	2	
1.3 Artistic Example	8	
1.4 Formal description	11	
1.4.1 The Lattice	11	
1.4.2 Lattice vectors	12	
1.4.3 The Unit Cell	13	
1.4.4 Number of lattice points in cell	18	
1.4.5 Wigner-Seitz cell	24	
1.4.6 Five Lattices in Two Dimensions	30	
<b>II Lecture 2</b>	<b>0</b>	
1.4.7 Fourteen Lattices in Three Dimensions	1	
1.4.8 Cubic Unit Cells	3	
1.4.9 Length Scale	8	
1.4.10 Cell Volume	8	
1.4.11 The basis	9	
1.4.12 Monatomic crystals	10	
1.5 Planar Hexagonal	11	
1.6 Cubic crystals	16	
1.6.1 Sodium Chloride	16	
1.6.2 Caesium Chloride	21	
1.7 Planes, Lines etc	26	
1.7.1 Miller Indices	26	
1.7.2 Directions	29	
1.7.3 Symmetry-related sets	29	
1.7.4 Spacing between planes	30	
<b>III Lecture 3</b>	<b>0</b>	
1.7.5 Spacing between planes	1	
<b>IV Lecture 4</b>	<b>0</b>	
<b>2 Crystal Diffraction</b>	<b>1</b>	
2.1 Bragg's Law	1	
2.2 Wavelengths and Energies	6	
2.2.1 X-ray sources	7	
2.2.2 Electron sources	9	
2.2.3 Neutron sources	10	
2.3 Elastic Scattering	12	
2.3.1 Example	14	
<b>V Lecture 5</b>	<b>0</b>	
2.4 Experimental Methods	1	
2.4.1 Laue Method	2	
2.4.2 Rotating Crystal Method	6	
2.4.3 Powder Methods	7	
2.5 Mathematics of Diffraction	9	
2.5.1 Monatomic Structure	9	
2.5.2 The Reciprocal Lattice	10	
2.5.3 The Scattered Amplitude	11	
2.6 The Laue Construction	12	
2.7 Non-Monatomic Structures	14	
2.7.1 Simple Treatment	14	

<b>VI Lecture 6</b>	<b>0</b>
2.7.2 Detailed Treatment . . . . .	1
2.8 Other Information . . . . .	2
<b>3 Bonding in Crystals</b>	<b>3</b>
3.1 Types of Bond . . . . .	3
3.2 Interatomic Potential Curves . . . . .	6
3.3 Interatomic Potential Curves . . . . .	7
3.4 van der Waals Interaction . . . . .	8
3.4.1 Short-range repulsion . . . . .	10
3.5 van der Waals Solids . . . . .	12
<b>VII Lecture 7</b>	<b>0</b>
3.5.1 Energy of van der Waals Solid . . . . .	1
3.5.2 Equilibrium Separation . . . . .	4
3.5.3 Choice of Structure . . . . .	5
3.5.4 Bulk Modulus . . . . .	6
3.6 Ionic Crystals . . . . .	9
3.6.1 Ionic Radii and Packing . . . . .	10
3.6.2 Ionic Lattice Sums . . . . .	13
3.6.3 Linear Chain . . . . .	14
3.6.4 Three dimensions . . . . .	14
3.6.5 Ionic Structures . . . . .	15
<b>VIII Lecture 8</b>	<b>0</b>
<b>4 Dynamics of Crystals</b>	<b>1</b>
4.1 Chains of Atoms . . . . .	2
4.1.1 Longitudinal Waves on Linear Chain . . . . .	3
4.1.2 The Brillouin Zone . . . . .	8
4.1.3 More than one atom per cell . . . . .	11
<b>IX Lecture 9</b>	<b>0</b>
4.1.3 More than one atom per cell (contd) . . . . .	1
4.1.4 Degenerate case of diatomic chain . . . . .	4
<b>X Lecture 10</b>	<b>0</b>
4.2 Normal Modes . . . . .	10
4.3 Phonon Density of States . . . . .	12
4.3.1 One Dimension - $g(k)$ . . . . .	12
<b>XI Lecture 11</b>	<b>0</b>
4.4 Three dimensions - $g(E)$ or $g(\omega)$ . . . . .	8
4.4.1 Special case - single frequency . . . . .	11
4.4.2 Quantised Simple Harmonic Oscillator . . . . .	14
<b>XII Lecture 12</b>	<b>0</b>
4.5 Experimental Specific Heats . . . . .	1
4.6 Debye Theory . . . . .	11
4.6.1 The Debye Frequency . . . . .	13
4.6.2 Debye specific heat . . . . .	15
4.6.3 Debye model: high T . . . . .	18
4.6.4 Debye model: low T . . . . .	20
4.6.5 Successes and shortcomings . . . . .	22
4.7 Lattice Thermal Conductivity . . . . .	1
4.8 Experimental values . . . . .	1
4.8.1 Phonons as particles . . . . .	4
4.8.2 Phonon momentum . . . . .	5
4.8.3 Phonon interactions . . . . .	6
4.8.4 Heat Transport . . . . .	8
4.8.5 Boundary scattering . . . . .	10
4.8.6 Point defect scattering . . . . .	11
4.8.7 Phonon-phonon scattering . . . . .	12
4.8.8 Combined processes . . . . .	15

<b>XIII Lecture 13</b>	<b>0</b>		
5 Electrons in Solids - Overview	1	6.5.1 The Wiedemann-Franz law . . . . .	4
5.1 Experimental values . . . . .	1	6.6 Conductivity – the view from reciprocal space . . . . .	7
5.1.1 Electrical Resistivity . . . . .	1	6.6.1 Electrical conductivity . . . . .	7
		6.6.2 Thermal conductivity . . . . .	9
		6.6.3 Contributions to scattering . . . . .	11
<b>XIV Lecture 14</b>	<b>0</b>		
6 The Free Electron Model	1	<b>XVII Lecture 17</b>	<b>0</b>
6.1 Basic Assumptions . . . . .	1	6.7 Plasma Oscillations . . . . .	1
6.1.1 Constant Potential . . . . .	2	6.8 The Hall Effect . . . . .	5
6.1.2 Free Electron Fermi Gas . . . . .	7	6.9 Free electron approximation – final comments . . . . .	11
6.1.3 The Fermi Energy . . . . .	9	6.9.1 Screening . . . . .	12
6.1.4 Orders of magnitude . . . . .	11	6.9.2 Electron-electron scattering . . . . .	13
6.1.5 The Fermi surface . . . . .	12	6.9.3 Binding energy of metals . . . . .	14
6.2 Some simple properties of the free electron gas . . . . .	13		
6.2.1 Thermionic emission . . . . .	13	<b>XVIII Lecture 18</b>	<b>0</b>
6.2.2 Field emission . . . . .	15	7 Electrons in Periodic Structures	1
6.2.3 Photoemission . . . . .	17	7.1 Bloch's theorem . . . . .	2
6.2.4 X-ray emission (Auger spectroscopy) . . . . .	18	7.2 The Nearly Free Electron model . . . . .	6
6.2.5 Contact potential . . . . .	20	7.2.1 Basic ideas . . . . .	6
<b>XV Lecture 15</b>	<b>0</b>	7.2.2 Perturbation theory . . . . .	8
6.3 Thermal Behaviour of free electron gas . . . . .	1	7.2.3 Fourier Analysis . . . . .	11
6.3.1 Review of Fermi function . . . . .	1	7.2.4 The Energy Gap . . . . .	12
6.3.2 Electronic specific heat . . . . .	3	7.3 An exactly-soluble model . . . . .	14
6.3.3 Experimental results . . . . .	6		
6.4 Electrical Conductivity . . . . .	8	<b>XIX Lecture 19</b>	<b>0</b>
6.4.1 Classical treatment . . . . .	8	7.3 An exactly-soluble model . . . . .	1
6.4.2 Relaxation time . . . . .	10	7.4 Sketching energy bands . . . . .	4
6.4.3 Electrical conductivity . . . . .	12	7.4.1 The empty lattice . . . . .	4
<b>XVI Lecture 16</b>	<b>0</b>	7.4.2 The nearly free electron . . . . .	5
6.4.4 Experimental results . . . . .	1	7.5 Consequences of the energy gap . . . . .	6
6.5 Electronic Thermal Conductivity . . . . .	2	7.5.1 Density of states . . . . .	6
		7.5.2 States in one dimension . . . . .	7
		7.5.3 Sketching a nearly free electron Fermi surface . . . . .	18
		7.5.4 Typical Fermi surfaces in 3D . . . . .	20

7.5.5 Effects of fields on electrons in bands . . . . .	25	9.6.1 Impurity states . . . . .	3
<b>XX Lecture 20</b>	<b>0</b>	9.6.2 Typical binding energies . . . . .	8
7.6 The tight-binding model . . . . .	1	9.6.3 Deep traps . . . . .	9
7.6.1 Overview . . . . .	1	9.6.4 Locating the chemical potential . . . . .	10
7.6.2 Tight-binding theory . . . . .	5		
7.6.3 Comments on tight binding theory . . . . .	12		
<b>XXI Lecture 21</b>	<b>0</b>		
<b>8 Electrons and Holes</b>	<b>1</b>		
8.1 Equations of motion . . . . .	1	9.7 Carrier concentrations . . . . .	1
8.2 Effective mass . . . . .	3	9.7.1 Overview . . . . .	1
8.2.1 Typical effective masses for semiconductors . . . . .	10	9.7.2 Detailed results . . . . .	4
8.3 Electrons and holes . . . . .	12	9.8 Mobility and conductivity . . . . .	5
8.3.1 Hole wavevector . . . . .	13	9.8.1 Scattering by charged impurities . . . . .	6
8.3.2 Hole energy . . . . .	13	9.8.2 Scattering by phonons . . . . .	7
8.3.3 Hole velocity . . . . .	14	9.8.3 Overall effect . . . . .	8
8.3.4 Hole effective mass . . . . .	15	9.8.4 Hall effect in semiconductors . . . . .	10
8.3.5 Hole dynamics . . . . .	16	9.8.5 Cyclotron resonance . . . . .	12
8.3.6 Experimental . . . . .	17	9.9 Carrier diffusion and recombination . . . . .	14
8.3.7 Mobility and conductivity . . . . .	18	9.9.1 Recombination . . . . .	15
<b>XXII Lecture 22</b>	<b>0</b>	9.9.2 Diffusion . . . . .	17
<b>9 Physics of Semiconductors</b>	<b>1</b>		
9.1 Creating free carriers . . . . .	1	<b>XXV Lecture 25</b>	<b>0</b>
9.2 Photon absorption . . . . .	2	9.9 Carrier diffusion and recombination . . . . .	1
9.3 Thermal excitation . . . . .	4	9.9.1 Recombination . . . . .	2
9.3.1 Law of mass action . . . . .	8	9.9.2 Diffusion . . . . .	4
9.4 Parabolic bands . . . . .	10	9.9.3 Electric current . . . . .	6
9.5 Intrinsic behaviour . . . . .	14	9.10 Heterojunctions . . . . .	7
<b>XXIII Lecture 23</b>	<b>0</b>		
9.6 Doping - donors and acceptors . . . . .	1	<b>XXVI Lecture 26</b>	<b>0</b>
		9.10 Heterojunctions (cont'd) . . . . .	1
		9.10.1 Junction transistor . . . . .	1
		9.10.2 Field effect transistor . . . . .	4
		9.10.3 Light-emitting diodes . . . . .	8
		9.10.4 Solar cells . . . . .	10
		<b>XXVII Lecture 27</b>	<b>0</b>

<b>10 Magnetic Materials</b>	<b>1</b>
10.1 Magnetic properties - reminder . . . . .	3
10.2 Measuring magnetic properties . . . . .	6
10.2.1 Force method . . . . .	6
10.2.2 Vibrating Sample magnetometer . . . . .	7
10.3 Experimental data . . . . .	8
10.4 Diamagnetism . . . . .	9
10.5 Paramagnetism . . . . .	15
10.5.1 Paramagnetism of spin- $\frac{1}{2}$ ions . . . . .	16
 <b>XXVIII Lecture 28</b>	 <b>0</b>
10.5.2 General $J$ ionic paramagnetism . . . . .	1
10.5.3 States of ions in solids . . . . .	7
10.6 Interacting magnetic moments . . . . .	15
10.6.1 Direct magnetic interaction . . . . .	16
10.6.2 Exchange interaction . . . . .	17
10.6.3 Effective field model . . . . .	18
10.6.4 The mean field approximation . . . . .	19
 <b>XXIX Lecture 29</b>	 <b>0</b>
10.6.5 Mean field theory of ferromagnetism . . . . .	1
10.6.6 Paramagnetic regime . . . . .	8
10.6.7 Effect of magnetic field on ferromagnet . . . . .	11
10.6.8 Anisotropy in magnetic systems . . . . .	15
10.7 Magnetic domains . . . . .	16
10.7.1 Magnetic field energy . . . . .	16
10.7.2 Domain walls . . . . .	18
10.8 Other types of magnetic ordering . . . . .	20
10.9 Magnetic properties of metals . . . . .	22
10.9.1 Free electron paramagnetism . . . . .	22
10.9.2 Ferromagnetic metals . . . . .	23
 <b>XXX Lecture 30</b>	 <b>0</b>
 <b>11 Superconductivity</b>	 <b>1</b>
11.1 Basic experimental observations . . . . .	1
11.1.1 Disappearance of resistance . . . . .	1
11.1.2 Specific Heat . . . . .	8
11.1.3 Effect of magnetic field . . . . .	10
11.1.4 Perfect diamagnetism . . . . .	10
11.2 Basic thermodynamics . . . . .	14
11.2.1 Specific heat . . . . .	16
11.2.2 The shielding currents . . . . .	18
 <b>XXXI Lecture 31</b>	 <b>0</b>
11.3 Phenomenological theories . . . . .	1
11.3.1 Measurement of penetration depth . . . . .	3
11.4 Coherence . . . . .	5
11.5 Microscopic model . . . . .	7
11.5.1 The energy gap . . . . .	11
11.5.2 The wavefunction . . . . .	12
11.6 Experimental evidence for energy gap . . . . .	15
11.6.1 Specific heat . . . . .	15
11.6.2 Infrared absorption . . . . .	16
11.7 Tunnelling currents . . . . .	19
11.7.1 Type I and type II behaviour . . . . .	23
